Postdoctoral Position in Cell Division

A postdoctoral position funded by NIH is available in **Jian-Qiu Wu**'s laboratory in Dept. of Molecular Genetics at **The Ohio State University**. We study molecular mechanisms of **cytokinesis in the fission yeast *S. pombe*** using a combination of molecular, cellular, biochemical, genetic, and confocal microscopic approaches. More information about our research can be found at (Vavylonis and Wu et al., Science, 2008; Wu et al., JCB, 2006; Wu and Pollard, Science, 2005; Wu et al., Dev. Cell, 2003) or <http://biosci.osu.edu/~nile/index.html>

Highly motivated and energetic candidates with strong background in molecular biology, cell biology, or genetics are required. Please email your curriculum vitae, reprints of publications, and names and contacts of three references to wu.620@osu.edu.

The Department of Molecular Genetics at OSU is a vigorous and highly interactive department that plays a central role in the molecular life sciences on campus. The department consists of faculty members studying important problems in molecular, cellular, and developmental biology using a variety of model organisms including plant and animal viruses, fungi, plants, worms, insects, mice, and humans. Departmental faculty members participate in numerous campus-wide collaborations and focus groups such as the Cell Biology Group, the Developmental Genetics Group, and the RNA group. The Ohio State University is the flagship institution of the state's higher education system. It is located in the state capital, Columbus, the 15th largest city in the United States. Columbus and its many suburbs have been ranked among the country's best places to live and work.
